

TechNova Team — Briefing

What we are, and what we will do

What TechNova Is (Current State)

- A **small software development team** building websites, mobile apps, cloud infrastructure, and custom solutions
- **Target clients:** startups, established businesses, and students (final-year projects)
- **Differentiators:** small team = accountability; quality-first engineering; transparent communication; end-to-end delivery (discovery → support)
- **Tech stack:** Next.js, React, Flutter, Node.js, Docker, AWS/Azure — modern and scalable
- **Process:** 7-step pipeline — Discovery → Planning → Design → Development → Testing → Deployment → Support

What We Will Do (Team Strategy & Action Plan)

"We build quality software, end-to-end, for businesses and students — and we win because we're small, transparent, and we actually deliver."

1. Position Clearly

- We are **not a freelancer**, and **not a giant agency**. We sell *quality, speed, and transparency* from a tight-knit team.
- Every pitch should emphasize team accountability and direct communication.

2. Own the Full Lifecycle

- Every project gets design, development, deployment, and post-launch support.
- No handoffs to external vendors. One team, one standard.

3. Target Two Tracks

Track A — Business Clients

- Custom websites, web applications, admin panels, dashboards, ecommerce
- Mobile apps (Flutter / React Native)
- MVPs for startups

- Cloud infrastructure & DevOps

Track B — Student Projects

- Final-year projects with complete documentation, PPT, source code & deployment
- Covers Web, Mobile, AI/ML, Cloud, IoT, Blockchain, Cybersecurity, and more
- A reliable revenue feeder with low acquisition cost

4. Use the Process as a Sales Tool

- The 7-step process (Discovery → Planning → Design → Dev → Testing → Deploy → Support) is not just internal ops.
- Pitch it to clients to show we are organized, predictable, and professional.

5. Communicate Constantly

- Regular updates, honest timelines, no surprises.
- This is our brand — *transparency*.

6. Build Portfolio Aggressively

- Every project goes live as a case study on the TechNova website.
- A strong portfolio is our best sales tool.

7. Keep Tech Stack Modern but Stable

- No chasing every new framework.
- Master the stack we list: Next.js, React, Flutter, Node.js, TypeScript, Docker, AWS/Azure, PostgreSQL, MongoDB.
